Integrated Blend Control Management

Integrated Blend Control Management is an optional module that “translates” between agrē and an automated blender (Kahler, Layco, Stockdales, LV, or Rancan).

It allows you to send target quantities to the automated blender and receive the actuals back with the click of a button.

Integrated Blend Control Management includes a window for managing blends sent to an automated blender, and full reporting of blend details.

Features of agrē Integrated Blend Control Management

- fully integrated with the *agrē Solution* and customer blend history
- capability to manage multiple automated blenders in multiple locations
- optionally import automated blender customer information into agrē
- map blend products between agrē and automated blender
- one-click export of target quantities and import of actuals for accurate inventory management
- ability to optionally add oil (or other product) to blends at a user-specified rate
- ability to specify minimum tonnage for delivery charges
- *Automated Blend Orders* window for manual blend order management and blend status at-a-glance
- complete reporting of automated blends

More Solutions by Tronia Systems

- **Customer Relationship Management** - included with agrē Lite
- **Hosted Solution** - access your data anywhere, anytime
- **Grower Central** - provide flexible, secure data access to your producers 
- **Agronomy**
