More Solutions by Tronia Systems

- **Customer Relationship Management** - included with agrē Lite
- **Hosted Solution** - access your data anywhere, anytime
- **Grower Central** - provide flexible, secure data access to your producers 
- **Agronomy**

agrē eSignature

eSignature is a premium module built on Namirial's advanced electronic signature solution that allows a customer (or a trucker, or anybody) to sign an electronic copy of an agrē report with an external signature pad, a mouse, or even a finger. **eSignature** works with Citrix providing additional security for signed documents.

Instead of printing a report, signing it, photocopying it, filing it, and then trying to find it when you need it; you'll preview it, add an eSignature or two, and save it. It will always be available to you in agrē, and optionally available to your customers in **Grower Central**.

agrē **eSignature** is compatible with Windows (laptops, desktops, tablets, hybrids, phones), Android (tablets, phones) and iOS (MacBooks, iPads, iPhones).

Advantages of agrē eSignature

- your company decides which reports can be signed (including work orders, loadout tickets, invoices, location transfers)
- signed documents are stored within agrē behind Citrix security
- each user can select their own default signing device
- signatures can be drawn with a mouse, stylus, or a finger
- a document may be signed multiple times (two different signatures on the same page)
- if a document is edited, it can be signed again
- signed documents cannot be deleted as long as the source document exists
- signed documents can be opened with any PDF reader (agrē uses Adobe Acrobat)
- they can be emailed or printed from within agrē
- and can be shared automatically with customers through **Grower Central**
