- **Integrated Blend Control** - communicate directly with integrated blend controllers
- **Agromony**
- **Customer Relationship Management** - included with the agrē Solution

# agrē Grower Central

**Grower Central** is an optional agrē module that provides a secure portal for your customers to login to your agrē database and view their account data online, any time, from anywhere they have an Internet connection.

Tronia designs your **Grower Central** site to look like your company website: we match your colours and use your logo so the pages look like an extension of your own site.

You setup and manage the **Grower Central** usernames and passwords in agrē and provide your customers with a link to the Grower Central login page from your company's website. You can also configure which documents and reports your customers are allowed to see, and compose a common message that will display to all Grower Central users when they login.

Your customers login to **Grower Central** to view past transactions, check their balances (both chargeable and prepay), view Agronomy activity, run reports, and update their username or change their password.

## What your Customers will see in Grower Central

### *Account Details (standard)*

- current chargeable balance
- current prepaid balance
- work orders
- loadout tickets
- invoices
- payment receipts
- statements
- prepayment report
