- **agrēGrain** - full grain management solution
- **Customer Relationship Management** - included with agrē

agrē Hosted

Your company relies heavily on its financial management and accounting solutions to manage and grow your business. But as your business grows traditional technology solutions can be more of a hindrance than a tool. Expensive upgrades to software and hardware, increased time spent administering and maintain your network and system downtimes can negatively impact your bottom line.

The **agrē Hosted service** can simplify your entire information technology situation – and reduce your technology expenses to a predictable monthly fee - by providing your agrē software solution as a service (SaaS). Your agrē software and data is hosted at a secure, state-of-the-art, redundant data center and is managed by Tronia’s IT experts and various host partners. **Hosted services** deliver complete administration and maintenance of your agrē solution, ensuring faster problem resolution, offsite data backup-up for disaster recovery, seamless upgrades, and automatic application of critical software patches.

With solutions that are up to date, available, and managed for performance by Tronia’s experts, your business can focus on its operations instead of its technology, helping you achieve a greater return on your technology investment.

The Future of Software Is Hosted

By implementing **agrē Hosted** in your organization, you can invest less time and money in managing software and focus your resources on growing your business.

Why agrē Hosted

The **agrē Hosted** service provides your business with the most powerful and flexible technology solution available to agribusinesses today.

- Improved Availability
- Ability to Grow
- Better Problem Management
- Tightened Security and Disaster Recovery
- Smoother Upgrades

agrē Hosted Benefits

- Reduces technology costs to a predictable monthly fee
- Easier to budget your technology costs
- Average 99.9% uptime improves availability of your technology solutions
- Multiple redundant servers means you are less likely to experience downtime due to hardware failures
- Never buy or upgrade a server again
- Use almost any client computer to access your accounting information – Windows, Linux or Macintosh
- Security from unauthorized entry and malicious Internet attacks
- Reduces the administration of system upgrades and patches – we do it for you
- Allows your employees to focus on your business instead of on your technology
- Access your accounting information from any computer with Internet access – easily and securely

Improved Availability

Tronia Systems provides 24/7 monitoring of your solutions to reduce both planned and unplanned downtime, and increase disaster recovery preparedness, to ensure that your solutions are up and running when you need them most.

Ability to Grow

The **agrē Hosted** service allows you to tailor your agrē solution to your company's needs. Our monthly/per user fee schedule allows you to add and remove users as required each month, so you can add users for your busy seasons and remove them in the slower months. This ability to add users easily also gives you the flexibility to expand your **agrē Hosted** solution as your business grows.

Better Problem Management

agrē Hosted customers tend to file fewer support calls and receive faster resolution to their support calls due to the fact that have less complex technology infrastructures within their organizations. Since **agrē Hosted** customers don't require servers or wide area networks to connect all of their users and locations together, they tend to have less problems with their computer systems. As long as each of your employees can access the Internet from wherever they are, they can connect and use the **agrē Hosted** solution.

Tightened Security and Disaster Recovery

agrē Hosted customers have a high level of security for their critical company data to help prevent security breaches, viruses and worms for impacting their business. All **agrē Hosted** data is backed up and secured off-site in a third party data facility to ensure that disaster recovery in the event of a situation is assured.

Smoother Upgrades

Tronia Systems provides our **agrē Hosted** customers automatic upgrades, reducing both the time and effort required to install upgrades so you benefit from the latest agrē software, effortlessly.
